latitude measures the distance north or south of the equator latitude lines start at the equator 0 degrees latitude and run east and west parallel to the equator lines of latitude are measured in degrees north or south of the equator to 90 degrees at the north or south poles latitude is the angular distance of a place north or south of the earth s equator the degree of the angle is between 0 and 90 longitude and latitude coordinates are usually expressed in degrees and minutes every location consists of a latitude and longitude which is like an unique address for each point at this latitude the sun is visible for 15 hours 1 minute and 28 seconds during the summer solstice and 9 hours 20 minutes during the winter solstice on 21 june the maximum altitude of the sun is 73 44 degrees while it s 26 56 degrees on 21 december a angular distance north or south from the earth s equator measured

through 90 degrees an island located at 40 degrees north latitude  
b a region or locality as marked by its latitude c dec 19 2022  
latitude is the measurement of distance north or south of the  
equator it is measured with 180 imaginary lines that form circles  
around earth east west parallel to the equator these lines are  
known as parallels a circle of latitude is an imaginary ring  
linking all points sharing a parallel the equator is the line of 0  
degrees latitude latitude is a measurement on a globe or map of  
location north or south of the equator technically there are  
different kinds of latitude geocentric astronomical and  
geographic or geodetic but there are only minor differences  
between them in most common references geocentric latitude is  
implied in geography latitude is a coordinate that specifies the  
north south position of a point on the surface of the earth or  
another celestial body latitude is given as an angle that ranges  
from 90 at the south pole to 90 at the north pole with 0 at the  
equator latitude a measure of relative position north or south on  
the earth s surface measured in degrees from the equator which  
has a latitude of 0 with the poles having a latitude of 90 north  
and the latitude is the angular distance of a place north or south  
of the earth s equator the degree of the angle is between 90 and  
90 it is usually expressed in degrees and minutes latitude and  
longitude are the units that represent the coordinates at  
geographic coordinate system to make a search use the name of  
a place city state or address or click the location on the map to  
find lat long coordinates place name add
