Global Ecology and Oceanography of Harmful Algal Blooms May 21 2022 Harmful algal blooms (HABs) - blooms that cause fish kills, contaminate seafood with toxins, or cause human or ecological health impacts and harm to local economies - are occurring more often, in more places and lasting longer than in past decades. This expansion is primarily the result of human activities, through increased nutrient inputs and various aspects of climate change. The Global Ecology and Oceanography of Harmful Algal Blooms (GEOHAB) programme promoted international collaboration to understand HAB population dynamics in various oceanographic regimes and to improve the prediction of HABs. This volume introduces readers to the overarching framework of the GEOHAB programme, factors contributing to the global expansion of harmful algal blooms, the complexities of HABs in different habitats, and the forward-looking issues to be tackled by the next generation of GEOHAB, GlobalHAB. The programme brought together an international team of contributing scientists and ecosystem managers, and its outcomes will greatly benefit the international research

community.

Strange Bright Blooms Mar 19 2022 Virginia Woolf famously began one of her greatest novels: "Mrs Dalloway said she would buy the flowers herself." Of course she would: why would anyone surrender the best part of the day to someone else? Flowers grace our lives at moments of celebration and despair. "We eat, drink, sing, dance, and flirt with them," writes Kakuzo Okakura. Flowers brighten our homes, our parties, and our rituals with incomparable notes of natural beauty, but the "nature" in these displays is tamed and conscribed. Randy Malamud seeks to understand the transplanted nature of cut flowers—of our relationship with them and the careful curation of their very existence. It is a picaresque, unpredictable ramble through the world of flowers, but also the world itself, exploring painting, murals, fashion, public art, glass flowers, pressed flowers, flowery church hats, weaponized flowers, deconstructed flowers, flower power, and much more.

Eutrophication Processes in Coastal Systems Nov 22 2019 Derived from an unprecedented research effort covering over 31 years in a series of studies of 7 major river-estuaries, Eutrophication Processes in Coastal Systems presents a comprehensive and current review of the nature of the eutrophication process and how short- and long-term nutrient loading affects marine systems. This unique book is the culmination of the most advanced research to date on how coastal systems work.

Based on an 11 year interdisciplinary study of the Perdido Bay System, Dr. Robert J. Livingston's groundbreaking work offers evidence for significant findings such as: Nutrient concentration gradients in fresh water as it entered the bay were stimulatory to phytoplankton blooms Species that showed distinctive seasonal and interannual successions dominated plankton blooms High relative dominance of bloom species was associated with significant reduction of phytoplankton species richness and diversity The blooms were associated with major reductions of infaunal and epibenthic macroinvertebrates, forcing a serious disruption of the food webs and losses of secondary production Eutrophication Processes in Coastal Ecosystems goes beyond its innovative analyses of how estuarine and coastal systems have responded to fundamental alterations of the eutrophication process. Dr. Livingston's book presents the case that bloom impacts must be reviewed against the background conditions that include periodic changes brought on by drought and anthropogenous dredging. It points to the critical need for further study of phytoplankton communities and the connection between plankton blooms, sediment deterioration, and low secondary production.

Algal Blooms and Membrane Based Desalination Technology Dec 16 2021 Seawater desalination is rapidly growing in terms of installed capacity (80 million m³/day in 2013), plant size and global application. An emerging threat to this technology is the seasonal proliferation of microscopic algae in seawater known as algal blooms. Such blooms have caused operational problems in seawater reverse osmosis (SWRO) plants due to clogging and poor effluent quality of the pre-treatment system which eventually forced the shutdown of the plant to avoid irreversible fouling of downstream SWRO membranes. As more extra large SWRO plants (>500,000 m³/day) are expected to be constructed in the coming years, frequent chemical cleaning (>1/year) of SWRO installations will not be feasible, and more reliable pre-treatment system will be required. To maintain stable operation in SWRO plants during algal bloom periods, pre-treatment using ultrafiltration (UF) membranes has been proposed. This thesis addresses the effect of algal blooms on the operation of UF pre-treatment and SWRO. Experimental investigations demonstrated that marine algal blooms can impact

the backwashability of UF and can accelerate biological fouling in RO. However, it is unlikely that algae themselves are the main causes of fouling but rather the transparent exopolymer particles (TEPs) that they produce. To better monitor TEPs, a new method capable of measuring TEP as small as 10 kDa was developed and showed that TEPs can be effectively removed by UF pre-treatment prior to SWRO. This work also demonstrated that although TEPs and other algal-derived material (AOM) are very sticky and can adhere to UF and RO membranes, adhesion can be much stronger on membranes already fouled with AOM. Moreover, a model was developed to predict the accumulation of algal cells in capillary UF membranes which further demonstrated that the role of algal cells in UF fouling is not as significant as that of AOM and TEPs. Overall, this study demonstrates that better analytical methods and tools are essential in elucidating the adverse impacts of algal blooms in seawater on the operation of membrane-based desalination plants (UF-RO). It also highlighted the importance of developing effective pre-treatment processes to remove AOM from the raw water and reduce the membrane fouling potential of the feed water for downstream SWRO membranes.

The 1619 Project Sep 01 2020 #1 NEW YORK TIMES BESTSELLER • NAACP IMAGE AWARD WINNER • A dramatic expansion of a groundbreaking work of journalism, The 1619 Project: A New Origin Story offers a profoundly revealing vision of the American past and present. FINALIST FOR THE KIRKUS PRIZE • ONE OF THE BEST BOOKS OF THE YEAR: The Washington Post, NPR, Esquire, Marie Claire, Electric Lit, Ms. magazine, Kirkus Reviews, Booklist In late August 1619, a ship arrived in the British colony of Virginia bearing a cargo of twenty to thirty enslaved people from Africa. Their arrival led to the barbaric and unprecedented system of American chattel slavery that would last for the next 250 years. This is sometimes referred to as the country's original sin, but it is more than that: It is the source of so much that still defines the United States. The New York Times Magazine's award-winning "1619 Project" issue reframed our understanding of American history by placing slavery and its continuing legacy at the center of our national narrative. This new book

substantially expands on that work, weaving together eighteen essays that explore the legacy of slavery in present-day America with thirty-six poems and works of fiction that illuminate key moments of oppression, struggle, and resistance. The essays show how the inheritance of 1619 reaches into every part of contemporary American society, from politics, music, diet, traffic, and citizenship to capitalism, religion, and our democracy itself. This is a book that speaks directly to our current moment, contextualizing the systems of race and caste within which we operate today. It reveals long-glossed-over truths around our nation's founding and construction—and the way that the legacy of slavery did not end with emancipation, but continues to shape contemporary American life. Her childhood friend Jenny Whitney has reeled in the most eligible bachelor in Ramble, Virginia, and she's hired Audrey to design the bouquet. But before Jenny can walk down the aisle clutching her blend of anemone, scabious, and pussy willow (a floral disaster in Audrey's mind), the groom is found dead—sprinkled with bits of a bouquet. This is bad for business—not to mention for Jenny, who has become the prime suspect. So Audrey decides to do a little digging herself, hoping she won't be the next Ramble resident pushing up daisies...

The Flowers Aug 12 2021 Dagoberto Gilb is "one of the most powerful writers in his generation, and The Flowers is perhaps his best book . . . Not to be missed" (Larry McMurtry). Sonny Bravo is a sensitive, unusually smart fifteen-year-old who lives with his vivacious mother. But when she marries an Okie building contractor, they are uprooted to a small apartment building in a city where prejudice is not just white against black, but also brown. As Sonny meets his new neighbors, he is inexorably ensnared in their lives: Cindy, a married, bored, drugged-up eighteen-year-old; Nica, a cloistered Mexican girl who cares for her infant brother despite never being allowed to leave her apartment; Pink, an albino black man who sells old cars in front of the building; and Bud, a muscle-bound construction worker who hates blacks and Mexicans, even while he's married to a Mexican-American woman. In arguably his most powerful work yet, Dagoberto Gilb has written "a psychologically complex novel" that transcends age, race, and time, displaying the fearlessness and wit that have helped make him one of America's most authentic and original voices (The Washington Post).

Every Bone a Prayer Feb 24 2020 "This is the kind of book we need to set literary expectations for a new decade. It's so textured, so layered with love and so wonderfully terrifying, intimate and magical."—Kiese Laymon, author of Heavy: An American Memoir Misty's holler looks like any of the thousands of hollers that fork through the Appalachian Mountains. But Misty knows her home is different. She may be only ten, but she hears things. Even the crawdads in the creek have something to say, if you listen. All that Misty's sister Penny wants to talk about are the strange objects that start appearing outside their trailer. The grown-ups mutter about sins and punishment, but that doesn't scare Misty. Not like the hurtful thing that's been happening to her, the hurtful thing that is becoming part of her. Ever since her neighbor William cornered her in the barn, she must figure out how to get back to the Misty she was before — the Misty who wasn't afraid to listen. This is the story of one tough-as-nails girl whose choices are few but whose fight is boundless, as her coping becomes a battle cry for everyone around her. Written by a

survivor of sexual abuse, *Every Bone a Prayer* is a beautifully honest exploration of healing and of hope. Praise for *Every Bone a Prayer*: "I couldn't stop reading Ashley Bloom's raw-boned language that carried me on young Misty's journey. Stung! Dec 28 2022 Our oceans are becoming increasingly inhospitable to life—growing toxicity and rising temperatures coupled with overfishing have led many marine species to the brink of collapse. And yet there is one creature that is thriving in this seasick environment: the beautiful, dangerous, and now incredibly

numerous jellyfish. As foremost jellyfish expert Lisa-ann Gershwin describes in *Stung!*, the jellyfish population bloom is highly indicative of the tragic state of the world's ocean waters, while also revealing the incredible tenacity of these remarkable creatures. Recent documentaries about swarms of giant jellyfish invading Japanese fishing grounds and summertime headlines about armadas of stinging jellyfish in the Mediterranean and Chesapeake are only the beginning—jellyfish are truly taking over the oceans. Despite their often dazzling appearance, jellyfish are simple creatures with simple needs: namely, fewer predators and competitors, warmer waters to encourage rapid growth, and more places for their larvae to settle and grow. In general, oceans that are less favorable to fish are more favorable to jellyfish, and these are the very conditions that we are creating through mechanized trawling, habitat degradation, coastal construction, pollution, and climate change. Despite their role as harbingers of marine destruction, jellyfish are truly enthralling creatures in their own right, and in *Stung!*, Gershwin tells stories of jellyfish both attractive and deadly while illuminating many interesting and unusual facts about their behaviors and environmental adaptations. She takes readers back to the Proterozoic era, when jellyfish were the top predator in the marine ecosystem—at a time when there were no fish, no mammals, and no turtles; and she explores the role jellies have as middlemen of destruction, moving swiftly into vulnerable ecosystems. The story of the jellyfish, as Gershwin makes clear, is also the story of the world's oceans, and *Stung!* provides a unique and urgent look at their inseparable histories—and future.

Blooms and Brushstrokes Nov 03 2020 Blooms and Brushstrokes takes you on a unique journey through the history of Australian art, one flower at a time, examining the blooms depicted in still lifes, floral portraits, decorative interiors and botanical illustrations by a long line of Australian artists. Mother-and-daughter team Penelope and Tansy Curtin start this fascinating journey in the late eighteenth century, when the traditions adhering to the Western art canon were transplanted into the newly colonised Australia. They follow it through the rapidly developing artistic styles of the early twentieth century, to the new media of the contemporary period. These works of art also shine a light on the role and importance of plants and flowers in everyday life. They illustrate changing floral fashions, as well as highlighting flowers in their various forms - cut flowers, pot plants and gardens.
