Mathematical Optimization Theory and Operations Research Mar 19 2022 This book constitutes the proceedings of the 18th International Conference on Mathematical Optimization Theory and Operations Research, MOTOR 2019, held in Ekaterinburg, Russia, in July 2019. The 48 full papers presented in this volume were carefully reviewed and selected from 170 submissions. MOTOR 2019 is a successor of the well-known International and All-Russian conference series, which were organized in Ural, Siberia, and the Far East for a long time. The selected papers are organized in the following topical sections: mathematical programming; bi-level optimization; integer programming; combinatorial optimization; optimal control and approximation; data mining and computational geometry; games and mathematical economics.

Engineering Optimization 2014 Apr 08 2021 Optimization methodologies are fundamental instruments to tackle the complexity of today's engineering processes. Engineering Optimization 2014 is dedicated to optimization methods in engineering, and contains the papers presented at the 4th International Conference on Engineering Optimization (ENGOPT2014, Lisbon, Portugal, 8-11 September 2014). The book will be of interest to engineers, applied mathematicians, and computer scientists working on research, development and practical applications of optimization methods in engineering.

The Politics of Shopping Nov 22 2019 This revised version of Kaela Jubas' award winning dissertation focuses on contemporary shopping practices, analyzing the ways concerned shoppers think about globalization, consumption, and their personal effect on the status quo. By using numerous examples from modern advertising, interviews with self-described "radical" shoppers, and selected quotes from scholars and experts, Jubas delves into questions of social justice, environmental awareness, and consumer identity -- all demonstrated by individual choices made at the checkout counter. Employing a variety of qualitative research techniques and complex and counterintuitive cultural theory, Jubas's study will interest those in adult education, cultural studies, consumer research, and qualitative inquiry.

Shop Problems in Mathematics Aug 24 2022 Excerpt from Shop Problems in Mathematics The arrangement is by subjects in order that a student may select those problems in which he is most interested, and that a teacher may readily arrange a course to meet the needs of his particular school. It is suggested that the work of the shop be correlated with that of the mathematical classroom. For example, when a student in a manual training high school is beginning to handle boards in the shop, he is commencing the study of algebra in his mathematical classroom. Let him be assigned some problems in the chapter on Board Measure, together with a review of work in fractions. From these problems he will acquire considerable information that will be useful in the shop, and from the formulas in board measure he will understand the meaning of letters as symbols of general number. If l and t stand for the length and thickness of the board that the student has just sawed off in the shop, they will have a definite meaning to him. The authors hope that the book will be found useful in any school where there are shops. It is adapted for use in the shop or the mathematical classroom, or in both. A student of this book should develop an appreciation of the value of mathematics in practical work, since all problems in the book are based on actual shop practice. He should learn to make a formula, solve it for any letter, and apply it intelligently. As he progresses the approximate nature of the results in real problems should become evident. He should learn that real problems very rarely "come out even," - that there is usually an allowance necessary for waste, and he should develop a certain judgment as to what that allowance is. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

Advances in Soft Computing Sep 20 2019 This volume constitutes the proceedings of the 18th Mexican Conference on Artificial Intelligence, MICAI 2019, held in Xalapa, Mexico, in October/November 2019. The 59 full papers presented in this volume were carefully reviewed and selected from 148 submissions. They cover topics such as: machine learning; optimization and planning; fuzzy systems, reasoning and intelligent applications; and vision and robotics.

Computational Intelligence in Flow Shop and Job Shop Scheduling Mar 27 2020 For over fifty years now, the famous problem of flow shop and job shop scheduling has been receiving the attention of researchers in operations research, engineering, and computer science. Over the past several years, there has been a spurt of interest in computational intelligence heuristics and metaheuristics for solving this problem. This book seeks to present a study of the state of the art in this field and also directions for future research.

Operations Research '93 Dec 16 2021 This proceedings volume contains extended abstracts of talks presented at the 18th Symposium on Operations Research held at the University of Cologne, September 1-3, 1993. The Symposia on Operations Research are the annual meetings of the Gesellschaft für Mathematik, Ökonometrie und Operations Research (GMOOR), a scientific society providing a link between research and applications in the areas of applied mathematics, economics and operations research. The broad range of interests and scientific activities covered by GMOOR and its members was demonstrated by about 250 talks presented at the 18th Symposium. As in recent years, emphasis was placed on optimization and stochastics, this year with a special focus on combinatorial optimization and discrete mathematics. We appreciate that with sections on parallel and distributed computing and on scientific computing also new fields could be integrated into the scope of the GMOOR. This book contains extended abstracts of most of the papers presented at the conference. Long versions and full papers of the talks are expected to appear elsewhere in refereed periodicals. The contributions were divided into sixteen sections: (1) Theory of Optimization, (2) Computational Methods of Optimization, (3) Combinatorial Optimization and Discrete Mathematics, (4) Scientific Computing, (5) Decision Theory, (6) Mathematical Economics and Game Theory, (7) Banking, Finance and Insurance, (8) Econometrics, (9) Macroeconomics and Economic Theory, (10) Stochastics, (11) Production and Logistics, (12) System and Control Theory, (13) Routing and Scheduling, (14) Knowledge Based Systems, (15) Information Systems and (16) Parallel and Distributed Computing.
