This two-volume set constitutes a state-of-the-art survey in the field of speaker classification, addressing many critical questions. The twenty-two articles of the second volume cover a number of areas, including gender recognition systems, emotion recognition, text-dependent speaker verification systems, an analysis of both speaker and verbal content information, and accent identification. A method for identifying the psychological and interpersonal self-protective attachment strategies of adults. This book focuses upon new methods of analysis for adult attachment texts. The authors' introduce a highly nuanced model—the Dynamic-Maturational Model (DMM)—providing clinicians with a finely-tuned tool for helping patients examine past relationships, in addition to gauging the potential effectiveness of various treatment options. The authors offer a fascinating explanation of the neurobiological underpinnings of DMM, grounded in findings from the cognitive neurosciences about information processing. In this volume, readers have an eminently practical, theoretically-grounded work that is sure to transform many types of therapy. 'They hang the man and flog the woman That steal the goose from off the common, But let the greater villain loose That steals the common from the goose.' - Traditional nursery rhyme Until a 1998 federal court decision, a Minnesota publisher claimed to own every federal court decision, including Roe v. Wade and Brown v. Board of Education. A Texas company was recently allowed to calm a patent on basmati rice, a kind of rice grown in India for hundreds of years. The Mining Act of 1872 is still in effect, allowing companies to buy land from the government at USD5 and acre if they pan to mine it. These are resources that belong to al of use, yet they are being given away to companies with anything but the common interest in mind. Where was the public outcry, or the government intervention, when these

were happening? The answers are alarming. Private corporations are consuming the resources that the American people collectively own at a staggering rate, and the government is not protecting the commons on our behalf. In *Silent Theft*, David Bollier exposes the audacious attempts of companies to appropriate medical breakthroughs, public airwaves, outer space, state research, and even the DNA of plants and animals. Amazingly, these abuses often go unnoticed, Bollier argues, because we have lost our ability to see the commons. Publicly funded technological innovations create common wealth (cell phone airwaves, internet addresses, gene sequences) at blinding speed, while an economic atmosphere of deregulation and privatization ensures they will be quickly bought and sold. In an age of market triumphalism, does the notion of the commons have any practical meaning? Crisp and revelatory, *Silent Theft* is a bold attempt to develop a new language of the commons, a new ethos of commonwealth in the face of a market ethic that knows no bounds. Nearly three decades since the publication of the seminal *Metaphors We Live By*, Cognitive Linguistics is now a mature theoretical and empirical enterprise, with a voluminous associated literature. It is arguably the most rapidly expanding 'school' in modern linguistics, and one of the most exciting areas of research within the interdisciplinary project known as cognitive science. As such, Cognitive Linguistics is increasingly attracting a broad readership both within linguistics as well as from neighbouring disciplines including other cognitive and social sciences, and from disciplines within the humanities. This volume contains over 20 papers by leading experts in cognitive linguistics which survey the state of the art and new directions in cognitive linguistics. The volume is divided into 5 sections covering all the traditional areas of study in cognitive linguistics, as well as newer areas, including applications and extensions. Sections include: Approaches to semantics; Approaches to metaphor and blending; Approaches to grammar; Language, embodiment and cognition; Extensions and applications of cognitive linguistics. The classic reference work that provides annually updated information on the countries of the world. In many ways, this edited volume can be read as a showcase for the state of affairs in SLA research. It exemplifies what makes current SLA work so energetic and vibrant, topically and methodologically innovative, insightful in its results, and intellectually and epistemologically expansive in its implications and significance beyond second language acquisition.

- Applied Linguistics This text brings together the work of scholars attempting to extend Vygotsky's theory to second language research. The papers included, are organized according to three of the major topics of interest in Vygotskian research: zone of proximal development, inner and private speech, and activity theory. All of the papers report on the results of empirical research carried on in these three areas. Readers will recognize the potential sociocultural theory and research has for developing a fuller understanding of L2 learning and use. This book is a collection of original research papers given at a symposium entitled "Sensory Systems and Behavior of Aquatic Mammals", hosted by the USSR Academy of Sciences. The meeting was held in Moscow from 16 to 25 October, 1991 and involved nearly 100 scientists from around the world. The major headings of the book correspond to the session topics at the symposium. This meeting was not the first dedicated to problems of sensory systems in aquatic mammals. Experts in this field met several times previously to discuss important problems of sensory functions in echolocating animals. symposia on biosonar systems were held in Frascati, Italy in 1966, then in Jersey, France in 1978, and in Helsingor, Denmark in 1986. Papers presented at these meetings were published in books that advanced significantly the understanding of sensory systems (Busnel and Fish, 1980; Nachtigall and Moore, 1988). Initially, echolocating bats were the main subjects of consideration. However, studies on echolocating aquatic mammals, whales and dolphins, increased from one meeting to the next. Indeed, aquatic mammals are of exceptional interest for studying the adaptation of sensory functions for echolocation in specific aquatic environments.

As a natural consequence of these developments, the 1989 symposium in Rome was devoted specifically to the sensory systems of cetaceans (Thomas and Kastelein, 1990). This symposium was held within the Fifth International Theriological Congress and was attended by many scientists.

The Talking Heads Experiment, conducted in the years 1999-2001, was the first large-scale experiment in which open populations of situated embodied agents created for the first time ever a new shared vocabulary by playing language games about real world scenes in front of them. The agents could teleport to different physical sites in the world through the Internet. Sites, in Antwerp, Brussels, Paris, Tokyo, London, Cambridge and several other locations were linked into the network. Humans could interact with the robotic agents either on site or remotely through the Internet and thus influence the evolving ontologies and languages of the artificial agents. The present book describes in detail the motivation, the cognitive mechanisms used by the agents, the various installations of the Talking Heads, the experimental results that were obtained, and the interaction with humans. It also provides a perspective on what happened in the field after these initial groundbreaking experiments. The book is invaluable reading for anyone interested in the history of agent-based models of language evolution and the future of Artificial Intelligence.

Sonic Detection and Ranging (SODAR) systems and Radio Acoustic Sounding Systems (RASS) use sound waves to determine wind speed, wind direction, and turbulent character of the atmosphere. They are increasingly used for environmental and scientific applications such as analyzing ground-level pollution dispersion and monitoring conditions affecting wind energy generation. However, until now there have been no reliable references on SODAR and RASS for practitioners in the field as well as non-experts who wish to understand and implement this technology to their own applications. Authored by an internationally known expert in the design and use of SODAR/RASS technology, Atmospheric Acoustic Remote Sensing: Principles and Applications systematically explains the underlying science, principles, and operational aspects of acoustic radars. Abundant diagrams and figures, including eight pages of full-color images, enhance clear guidelines and tools for handling calibration, error, equipment, hardware, sampling, and data analysis. The final chapter explores applications in environmental research, boundary layer research, wind power and loading, complex terrain, and sound speed profiles. Atmospheric Acoustic Remote Sensing offers SODAR and RASS users as well as general remote sensing practitioners, environmental scientists, and engineers a straightforward guide for using SODARs to perform wind measurements and data analysis for scientific, environmental, or alternative monitoring applications. Widdowson. *Principle and Practice in Applied Linguistics* provides a comprehensive overview of the many and diverse areas in applied linguistics today. The papers range from second language acquisition to discourse analysis, corpus linguistics, and classroom practice; together they emphasize the reciprocal relationship of principle and practice, and the interdisciplinary nature of applied linguistics. Good clinical practice is impossible without an understanding of the ways in which patients present their complaints. Patients have their own styles of coping and of expressing their concerns, and without a clear understanding of these the clinician may find successful and swift diagnosis and treatment much harder to achieve. *Coping and Complaining* provides essential guidance for clinicians on how to identify various coping styles, and how to improve the quality of discourse with people of different backgrounds and ages. Drawing on a diverse range of evidence from such areas as developmental psychology, and theories on learning and memory, *Coping and Complaining* provides essential information on identification of patients' coping styles, focusing on such areas as:

- The latest developments in attachment theory
- The neurobiology of emotional development, and the biology of language development
- Primary processes in early development
- Communication, role play, the moral order of the consultation, and emotional first aid
- Consequences for preventive medicine

Coping and Complaining presents stimulating new approaches to consultations with patients and creative new ways of looking at health promotion. An introduction to the field of second language learning for students without a substantial background in linguistics, this book provides an up-to-date introductory survey of the most active and significant theoretical perspectives on the subject. This book offers a succinct theoretical introduction to the basic concepts in language testing in a way that is easy to understand. In the Japanese context, this book is highly recommended for university faculty members involved in obtaining assessment literacy, teachers who want to validate their exploratory teaching and testing, or applied linguistics students new to the language testing field. The book is divided into four main sections. The first provides an overview of the principles of language testing. The next contains short extracts from the testing literature with questions which stimulate further thinking. Section 3 is a list of references with brief annotations and Section 4 a glossary of referenced testing terms.

The myth of Ronald Reagan's greatness has reached epic proportions in recent years. The public rates him as one of the most popular presidents, and Republicans everywhere seek to cast themselves in his image. But, William Kleinknecht reveals, much that has gone wrong in America - including the subprime mortgage crisis and the meltdown of the financial sector - can be traced directly to Reagan's policies. Boom-and-bust cycles, CEO salaries, drug-company scandals, collapsing bridges, plummeting wages for working people, the flight of U.S. manufacturing abroad - these are all products of Reagan's free-market zealotry and his gutting of the public sector. *The Man Who Sold the World* is the first book to explode the Reagan myth. A low-tech way to understand a high-tech system! Create the home entertainment center that fits your home and your tastes. Gadget fans, a home theater setup is the stuff your dreams are made of. This book keeps the dream from becoming a nightmare! Here's how to select, set up, and optimize a system, translate the salesperson's geek-speak, connect all the parts throughout your home, and even do cool stuff like accessing your system from your laptop computer. The bibliography lists nearly 5,000 compositions by 200 composers of jazz and "art" music, indicating where scores or realizations can be purchased, rented, or borrowed, and which Boston area libraries have them in their collections.

David Green wants payback. It's been more than thirty years since his son, Aaron, was murdered by Arabs in the 1973 Yom Kippur War. And after the 2006 war in Lebanon between Israel and Hezbollah, Green has

abandoned all hope that the Israelis can defeat the Arab militants. Now it's 2007, and David is ready to avenge his son's death-on his own terms. David calls on his oldest group of friends, the Stony Island Gang, to help him execute Project Moses, his brazen plan to send terminally ill Jewish suicide bombers into Palestine and Lebanon to target one hundred Arab terrorists. Together, the men argue the moral implications of David's proposal. Echoing the centuries-old debate over the horns on Michelangelo's statue of Moses, they question whether murder is always unthinkable or sometimes justifiable. Despite misgivings, the gang puts Project Moses into action and begins the hunt for willing recruits. As their scheme takes shape, David and his friends cannot possibly know the chaos, suspicion, and international panic that are about to ensue. Can murder and treachery possibly pave the road to peace?

Peer Interaction and Second Language Learning synthesizes the existing body of research on the role of peer interaction in second language learning in one comprehensive volume. In spite of the many hours that language learners spend interacting with peers in the classroom, there is a tendency to evaluate the usefulness of this time by comparison to whole class interaction with the teacher. Yet teachers are teachers and peers are peers – as partners in interaction, they are likely to offer very different kinds of learning opportunities. This book encourages researchers and instructors alike to take a new look at the potential of peer interaction to foster second language development. Acknowledging the context of peer interaction as highly dynamic and complex, the book considers the strengths and limitations of peer work from a range of theoretical perspectives. In doing so, Peer Interaction and Second Language Learning clarifies features of effective peer interaction for second language learning across a range of educational contexts, age spans, proficiency levels, and classroom tasks and settings.

Entries range from short definitions to a series of core essays exploring the legislative process, the seniority system, the committee system, the budget process, and other broad areas. Over the years, a considerable amount of work has been conducted in the field of peace studies, conflict management, peace science in economics, sociology, anthropology and management. This title presents research by scholars with an emphasis on theoretical and mathematical constructs in the area of peace economics and peace science. This book constitutes the thoroughly refereed joint post-workshop proceedings of two co-located events: the Second International Workshop on Classification of Events, Activities and Relationships, CLEAR 2007, and the 5th Rich Transcription 2007 Meeting Recognition evaluation, RT 2007, held in succession in Baltimore, MD, USA, in May 2007. The workshops had complementary evaluation efforts; CLEAR for the evaluation of human activities, events, and relationships in multiple multimodal data domains; and RT for the evaluation of speech transcription-related technologies from meeting room audio collections. The 35 revised full papers presented from CLEAR 2007 cover 3D person tracking, 2D face detection and tracking, person and vehicle tracking on surveillance data, vehicle and person tracking aerial videos, person identification, head pose estimation, and acoustic event detection. The 15 revised full papers presented from RT 2007 are organized in topical sections on speech-to-text, and speaker diarization. Nicely balanced and workable, this introductory book emphasizes practical application of instrumentation, offers clear explanations with a minimum of mathematical analysis, includes a large number of review exercises and real-world problems in every chapter, and shows many examples that are worked out, clearly marked, and set off from the text. Topics are covered in an easy-to-read format and explanations are lucid. This book examines the formal bases of postvelar harmony and its crosslinguistic variation. It is of interest especially to phonologists concerned with segmental harmony and its explanation within Optimality Theory. Postvelar harmony in two unrelated languages, Palestinian Arabic and St'át'imcets Salish, is examined in detail. The result is the first comprehensive clarification of postvelar phonology for either language. Two harmonies are distinguished: uvularisation harmony ('emphasis spread') and pharyngealisation (tongue-root-retraction) harmony. The distinction between these two in the Arabic and the Salish is supported by much instrumental phonetics data. The complex harmony properties are explained as the result of systematic interaction between Correspondence, Alignment and Grounded constraints. In the course of the investigation, the segmental inventories of both languages are clarified, and a careful understanding of the distinction between phonology and phonetics, and the use of phonetics in phonology, is applied. This book examines the various patterns of nominal and pronominal address used in Jamaica and Trinidad, the two most populous islands of the English-speaking Caribbean. Given that the Anglo-Caribbean context has so far been largely neglected in address research, this study aims to provide an in-depth analysis of the linguistic means Jamaicans and Trinidadians have at their disposal and make use of to address each other. A particular focus will be on variation in the speakers' address behaviour with regard to their sex, age, social class, ethnicity, and regional background. The study draws both on data from a self-compiled corpus of postcolonial Jamaican and Trinidadian literary works, and on questionnaire and interview data collected during fieldwork. This book contributes to the ever-growing body of research in the field of nominal and pronominal address, and will be relevant to researchers interested in the fields of sociolinguistics, pragmatics, and World Englishes. Standing outside elite or even middling circles, outsiders who were marginalized by limitations on their freedom and their need to labor for a living had a unique grasp on the profoundly

social nature of print and its power to influence public opinion. In *Empowering Words*, Karen A. Weyler explores how outsiders used ephemeral formats such as broadsides, pamphlets, and newspapers to publish poetry, captivity narratives, formal addresses, and other genres with wide appeal in early America. To gain access to print, outsiders collaborated with amanuenses and editors, inserted their stories into popular genres and cheap media, tapped into existing social and religious networks, and sought sponsors and patrons. They wrote individually, collaboratively, and even corporately, but writing for them was almost always an act of connection. Disparate levels of literacy did not necessarily entail subordination on the part of the lessliterate collaborator. Even the minimally literate and the illiterate understood the potential for print to be life changing, and outsiders shrewdly employed strategies to assert themselves within collaborative dynamics. *Empowering Words* covers an array of outsiders including artisans; the minimally literate; the poor, indentured, or enslaved; and racial minorities. By focusing not only on New England, the traditional stronghold of early American literacy, but also on southern towns such as Williamsburg and Charleston, Weyler limns a more expansive map of early American authorship. First full comprehensive guide to one of the most important genres of music in the Middle Ages.
